

Dhruv Malusare

JAVA FULL STACK DEVELOPER

Full Stack Java Developer specializing in Spring Boot, Microservices Architecture, AI-integrated systems, Secure REST APIs, and React-based frontends.

Vadodara, Gujarat | +91 9725296723 | dhruvmalusare13@gmail.com | github.com/ZoroHunter-007 | linkedin.com/in/dhruvmalusare-b59073389

PROFESSIONAL SUMMARY

Java Full Stack Developer with 1.5+ years of hands-on project experience through self-initiated and training-based development, building production-grade backend systems and full-stack applications. Proficient in Spring Boot, Spring Security, JWT authentication, and Microservices Architecture. Experienced in integrating AI APIs (Gemini 2.5 Flash/Pro), asynchronous message queuing (RabbitMQ), distributed caching (Redis), and CI/CD pipelines with Docker and Jenkins. Built complete full-stack applications using React, Vite, and Tailwind CSS. Strong grasp of Design Patterns (Strategy, Factory), clean code principles, and layered system architecture. Interested in applying Java expertise to compliance-driven financial systems and data processing pipelines.

EDUCATION

Bachelor of Computer Applications (BCA)

Shri D.N. Institute of Computer Application, Anand.

2022 – 2025 | CGPA: 8.00 / 10

PROJECTS

AI Resume Builder & ATS Checker

- Built a full-stack AI-powered resume builder with JWT authentication, role-based access (User/ Admin), and profile management — backend on port 8081 with **ApiResponse<T>** wrapper for consistent API contracts.
- Integrated **Gemini 2.5 Flash/Pro** via WebClient for AI-driven resume generation, ATS scoring, and keyword optimization with primary/fallback model routing.
- Implemented **Redis caching** (10-min TTL, GenericJackson2JsonRedisSerializer) reducing redundant Gemini API calls and cutting response latency by ~60%.
- Configured **RabbitMQ** for async email delivery — decoupled email pipeline using EmailConsumer, EmailMessage DTO, and RabbitMQConfig.
- Built responsive React frontend (Vite + Tailwind CSS + Framer Motion) with glassmorphism AuthPage, sliding panel animations, and protected route architecture using AuthContext + JWT.
- Containerized full stack with **Docker Compose** (MySQL, backend, frontend, Redis, RabbitMQ).

Tech: Java 17, Spring Boot 3.x, Spring Security, JWT, MySQL, Redis, RabbitMQ, Gemini 2.5 API, React, Vite, Tailwind CSS, Docker

GitHub: github.com/ZoroHunter-007/AI-ResumeBuilder_ATSChecker

Agentic AI Platform (JARVIS)

- Designed and built a fully agentic AI backend with a THINK → TOOL → MEMORY → RESPONSE execution loop using the **Strategy Design Pattern** (PlanningEngine, PlanExecutor, ToolRegistry).
- Integrated **Gemini 2.5** with primary/fallback client routing and **Serper API** for real-time web search with three-path decision routing.
- Implemented dual-layer **AgentMemory** (in-memory + persistent DB) for context retention across agent cycles.
- Configured **Docker Compose** multi-container deployment and a **Jenkins CI/CD pipeline** for automated build and redeploy.
- Built React + Framer Motion frontend with real-time agent response rendering.

Tech: Java, Spring Boot, WebClient, Gemini API, Serper API, Docker, Jenkins, React, Vite

GitHub: github.com/ZoroHunter-007/AgenticAI_Project

Distributed Microservices Backend (Spring Cloud)

- Built independent School and Student services using Spring Boot; registered via **Eureka Server** for service discovery.
- Configured **Spring Cloud API Gateway** for centralized JWT-authenticated routing across all microservices.
- Enabled type-safe service-to-service communication using **Feign Client** with fallback handling.
- Achieved full separation of concerns across 4 independent deployable services each with its own DB schema.

Tech: Spring Boot, Spring Cloud, API Gateway, Eureka, Feign Client, MySQL

GitHub: github.com/ZoroHunter-007/MicroService_Project

PROFESSIONAL TRAINING

Java Full Stack Developer Certification (Training Program – Ongoing) | Tops Technologies | 2025

- Completed hands-on training in Core Java, OOPs, Collections Framework, and JDBC.
- Developed and deployed RESTful APIs using Spring Boot and Spring Data JPA.
- Implemented authentication and authorization using Spring Security and JWT.
- Built Microservices using Eureka Server, API Gateway, Feign Client, Docker, and Jenkins CI/CD.
- Developed full-stack applications integrating Spring Boot backends with React + Vite frontends.
- Worked with Redis caching, RabbitMQ messaging, and Gemini AI API in production-like projects.

TECHNICAL SKILLS

Programming: Java (8+), OOPs, Collections Framework, Exception Handling, Multithreading (Basics), Stream API

Backend Development: Spring Boot 3.x, Spring MVC, Spring Security, JWT Authentication, RESTful APIs, Layered Architecture (Controller–Service–Repository), DTO Mapping, Global Exception Handling, Design Patterns (Strategy, Factory)

Microservices Architecture: Eureka Server, Spring Cloud API Gateway, Feign Client, Service-to-Service Communication

AI & API Integration: Gemini 2.5 Flash/Pro, WebClient, Serper API, Fallback Handling, Primary/Fallback Routing

Async & Caching: RabbitMQ (async messaging), Redis (distributed caching), GenericJackson2JsonRedisSerializer

Frontend: React, Vite, Tailwind CSS, Framer Motion, JavaScript (ES6+), HTML5, CSS3, AuthContext, Protected Routes

Database & ORM: MySQL, JPA, Hibernate, CRUD Operations, Complex Joins, Subqueries, Indexing Basics, Database Design

Security: Authentication & Authorization, BCrypt Password Encoding, Role-Based Access Control, @EnableMethodSecurity

DevOps & CI/CD: Docker, Docker Compose (multi-container), Jenkins CI/CD Pipeline, Nginx Reverse Proxy

Tools: Git, GitHub, Maven, Postman, IntelliJ IDEA, Eclipse, VS Code, Environment Variable Configuration
